

# ONE PIPE NEWS

BECOME YOUR OWN RED PILL PUBLISHER.

**SOMETIMES** getting information out to the public takes rebel thinking.

**SOMETIMES** getting information out to the public takes rebel thinking.

A piece of plywood, pipe, a pair of screws & a few tools is all that is needed in a populated area. For under \$100.00 you could make 10 of these and become your free local newspaper printing the **TRUTH**.

With a team of 5 or more people you could blanket an area far and wide for your cause. Using the moniker “1 PIPE NEWS” keeps you anonymous and united with others doing the same to get the truth out.

LESSONS ON PUSH-BACK ARE FREE HERE.

## THE S2 PROJECT

LIBERTY MUST WIN!

Fighting For ; Better Public Education, Government Transparency & Ending Corruption

Shopping centers- sidewalks  
Downtown sidewalks

The legality of sign placement is a bit questionable since you posting on public and other property. But not the first amendment for WHAT you post. Another word about the first amendment. You may want to actually the full text of it on what you post. A recent story of a man who posted, “IT'S OKAY TO BE WHITE”, around an American city on plain paper with Scotch tape had the main street media triggered. Had he actually put the text of the first amendment on the bottom, they would have to descry their aversion to the first amendment.

Installing at your selected locations.

Bus stops- edge of sidewalk in the dirt. This is faster and less noisy.

Replace as some may be taken away for the scrap value of the pipe or city workers.

The minimum tools you will need.

The minimum materials you will need.

masking tape.

Additional materials to consider.

Have a cabinet shop make the plywood if you don't have the skills and tools to cut the wood. It adds to the expense but still cheaper than buying the tools and maybe losing a finger if you don't know how to use them.

Other tools you will need.

Hammer Drill brands and types

How often you post something new is up to you. Once a week is our recommendation

Laminate your creations. Use plastic. But we also found that spraying both side with clear acrylic works for the week or so for regular print paper. Over time the process takes less maintenance.

What size to make you plywood.

10 inches wide, 16 inches high for legal size paper. (Recommended)

10 inches wide, 12 inches high for standard size paper.

Mounting to existing sign posts. This is slightly a different strategy for more urban areas.

\*\*This is not a complete program of how to go about this. Use your own creativity in what and where you post ONE PIPE NEWS.
