Out take from transcript< "...

major resources being managed out through that offshore haven which I think includes a lot of the money that's

been disappearing from the US government or certainly was disappeared through them through HUD and the pump-and-dump

of the housing market so the question is if you're taking the US government books dark and we already have the offshore

havens dark what the world's going on now clearly to me what's important is what we are being told by the politicians the pensions are underfunded there's no money to fund the pensions there's no money for health care there's no money for all these things the reality is well if you say there's no money but you refuse to produce audited financial statements for the last 20 years and we have undocumented

justments that are many thousands of multiples more than what would be considered immaterial I say not acceptable time for an audit and and not just an audit of the US government and Aude it a real audit but an audit of the Federal Reserve if Greg if if I came to you let's let's say dr. Skidmore is a wonderful

example of a church if you came to the church business meeting and the church had a budget of \$500,000 and the pastor got up and said we have undocumented justments of five million dollars and or

50 million dollars and I can't give you financial statements and it appears we're missing five million dollars from last year what would you say you wouldn't say well make sure you don't do it next

year you would say no I want you to go find that five million dollars right same thing with the twenty-one missing trillion dollars where is it right well it's no money for the pension funds you know if the

pension funds are going to be unfunded if health care is going to be unfunded if infrastructure is gonna be unfunded that I want to know what was that 21train and where did it go do we get a new dollar out

of this do we do they come up some day and say hey listen but we have a new dollar we're gonna get rid of the Fed Reserve does that happen someday daddy days off the reset looks like I mean

everybody's talking about this reset I mean the I miss out about everybody so we so look like so what I'm gonna tell you is that's irrelevant that's a relevant question and here's why if you were in a system

where a secret group of people can do whatever they want whenever they want including you know burn you out of your house or take your assets whenever they want there are no property rights and

you're in a slavery system so this is far bigger than will there be a dollar or will gold go up in price because we're recreating a governance structure that says they can come and steal your assets whenever

they want I remember when I was involved in the you know really focused on the gold markets the group had gotta wrote in a letter to the Treasury saying do you reserve the right to seize gold and they

came back with a reply on on stationery saying we reserve the right to seize all your assets so this is not about what will the dollar look about like this is about whether or not you will be allowed to own

private assets that's how big this is that's why you know if you if you go to Constitution down celeriac calm you'll see a picture of George Washington with a big kiss on his forehead our wrap up in the

second quarter of 2016 was enforce the Constitution er you can kiss your money goodbye so my question is will you be allowed to have assets when this is all over because that's what we're doing here

we're changing the legal and governance structure to say you know we reserve the right to not only debase your private property but to siphon it or take it I mean if you look at the cover of our 2018

annual wrap up which we'll publish next month and we're publishing the audios now throughout the month but you can see it if you come to HUD missing money dot salary.com or you come to salary.com

you can see it on the cover if you look at what that says is you're putting money into the system and then that money is disappearing out the back door while you are on the hook for it make no mistake

about it Gregg if I put real money in a pension fund and I get...
