

Dr explaining the pandemic to a coma patient who just woke up...
 Story by;

Dr: "They shut down the world because of a worldwide pandemic."	Patient: "I don't get it."
Patient: "OMG! How many people are infected?"	Dr: "Neither do I."
Dr : "About 11 Million."	Patient: "It doesn't sound very deadly. If the other 11 million people didn't have symptoms then how do they even know they had the virus?"
Patient: "OMG! 11 million people died?"	Dr: "They were tested."
Dr: "No, only 500 thousand... Kind of."	Patient: "But you just said that the tests are inaccurate."
Patient: "What do you mean 'kind of'?"	Dr: "They are. No-one has isolated the virus so the tests don't really test for that."
Dr: "Well... they keep halving the number of deaths due to double counting, inaccurate tests and mislabeled death certificates. Also, most of the people that die are elderly and dying of other things. There are also people who died because of incorrect ventilator use and other treatments because no-one really understands the virus."	Patient: "I don't get it."
Patient: "I don't get it. So how many died from ONLY the virus... like literally dropped dead in the street?"	Dr: "Neither do I."
Dr: "No-one. Only in hospitals and nursing homes"	Patient: "Ok. So when will this pandemic be over?"
Patient: "I don't get it."	Dr: "When they develop a vaccine to stop the virus."
Dr: "Neither do I, it's a very confusing time."	Patient: "The virus that nobody gets or dies from."
Patient: "So they cured the other 11 million people then?"	Dr: "Exactly."
Dr: "No, most didn't have any symptoms and in fact they didn't even know they had it."	Patient: "I don't get it."
	Dr: "Neither do I."
